

Morbidity-Mortality Committee report to the Executive Council- October 8, 2006

Preparations for the Basic Mortality Course are proceeding smoothly under the capable direction of Drs. Engman and Ashley. Homework has been corrected and returned.

The Build Study was completed.

Mortality and Morbidity Liaison Committee is hoping use the ISCS database to study:

- 1) EKG and cardiac disease codes: The EKG and cardiac diseases group is being chaired by Dr. Krause, SwissRe.
- 2) Older age survival, possibly in concert with the Individual Life Experience Study. This group is chaired by Dr. Ashley, GenRe.
- 3) Hazardous sports and aviation. Chaired by Brad Roudebush, Northwestern Mutual.

Although the possibility of holding an Advanced Mortality Course has been discussed and former Directors contacted, there were no volunteers identified who were able to co-ordinate that effort this year.

David Winsemius, MD, MPH
